BANKS, PUBLIC BUILDINGS, CHURCHES,
CLUBS, HOSPITALS, RESIDENCES, STORES,
COMMERCIAL AND INDUSTRIAL PLANTS.

The EDWIN F. GUTH COMPANY

DESIGNERS - ENGINEERS - MANUFACTURERS
ST. LOUIS. U.S.A.

Main Entrance to Guth Display Studios

ST. LOUIS, MO.

Our Studios, which are located in our manufacturing plant, cover an area of over 5,000 square feet. Rooms are completely furnished in the various period styles and the lighting equipment displayed is in keeping with the interior decorations. Visitors are welcome to inspect this "Fairyland of Light", where luminaires of every kind are suitably displayed.

TELEGRAPH CODE

Our registered cable address is "Brascolite, St. Louis, U. S. A." The use of the following phrase code words and the code words shown after each type of fixture will reduce your telegraph or cable expense and at the same time give us definite information.

...FOREWORD...

IN THIS CATALOG we show a large and varied assortment of luminaires suitable for practically every type of building. Many of the types illustrated are new and have never before been cataloged. Our fixtures are made from exclusive designs created by our expert engineers and designers, and many of them are covered by letters patent in the United States and foreign countries.

line of lighting equipment, which includes thousands of y a few examples of each kind to give an idea of the master craftsmanship that enter into every fixture we

templates for every fixture illustrated in this catalog, so y of these items. With our large production capacity re reduced to the minimum.

r Facilities

ely equipped factory devoted to the manufacture y operation from the raw material to the finished ilt into every fixture we make. Hundreds of skilled e of their work, are employed in our eleven manu- n machinery and improved methods of production onable cost. Every fixture is thoroughly inspected ant, to insure perfect workmanship and safe delivery. fidently relied upon for immediate installation.

y-two years of experience in manufacturing lighting

which is considered suitable for any work under al designs will bring to you promptly such additional

ent, to assist you in the solution of any illuminating g.

ment of Contents

been arranged, as far as possible, to enable a selection ; pages. For example, standards and outside lanterns d luminaires suitable for public buildings, hotels, anesque and other types for churches will be found

Industrial types include Brascolites, Aglites, Magic-Lites, E-Lites, Concealites and Industrolites.

For Hospitals, Schools and Commercial buildings we make glazed porcelain enameled fixtures of all kinds. Guth porcelain enameled units have a permanent high lustre finish that will not check, peel or tarnish. It can be applied to sheet iron, sheet steel, sheet copper and cast iron in practically any color. An extra charge must be made for matching colors other than our standard; unless a sufficient quantity of fixtures is ordered to absorb the additional cost of manufacture.

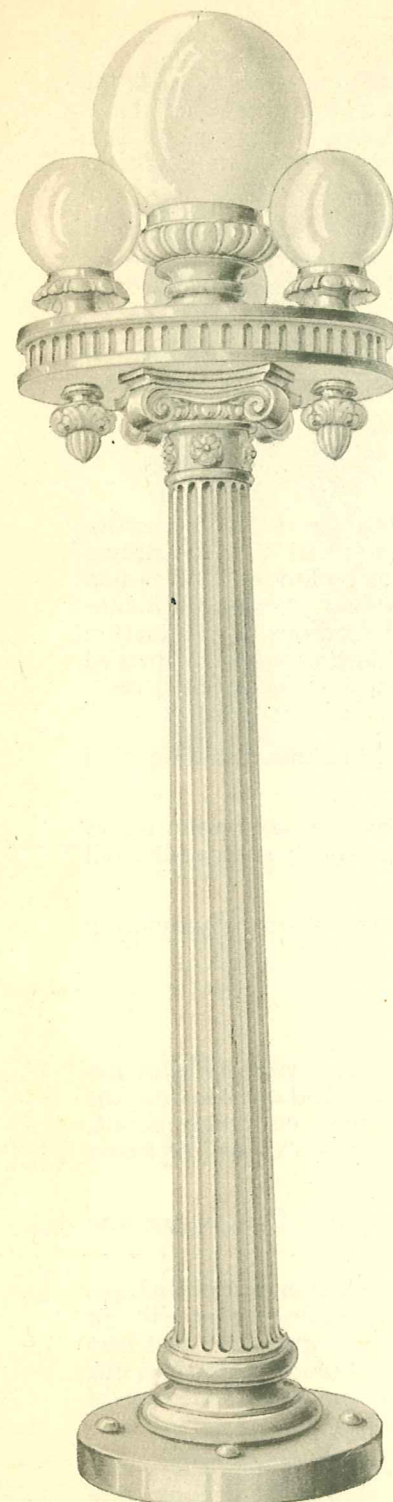

All fixtures are furnished complete, with the exception of electric lamps. Chandeliers and brackets are wired, but not assembled—arms and sockets are supplied with enough wire extending to allow for connection in body. Ample wire is also furnished for stem of fixtures.

It is optional with purchaser whether glassware illustrated is supplied with fixtures. If glassware shown is not desired, the full list price, as given on page 96, may be deducted.

NOTE: *Brascolite, E-Lite, Magic Lite, Aglite and Noshadowlite are patented. Patents are pending on Maze-Lite, Guth Reflector Flange and Station Lite.* This catalog supersedes all previous catalogs and prices. Prices shown herein are subject to change without notice.

Ball Lamp not furnished

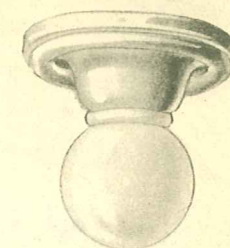

The AGLITE line of porcelain enamel units is ideal for use wherever cleanliness and sanitation are paramount. They harmonize perfectly with the interiors of white tiled bathrooms, kitchens, hospitals, laboratories, etc.

AGLITE canopies are stamped from a single piece of heavy gauge Armco iron and three coats of permanent porcelain enamel are then fused on at 1,600 degrees Fahrenheit in our electric porcelain enameling furnaces. This process insures a smooth surface that is self-insulated and is guaranteed not to check, peel, tarnish, rust or discolor.

No metal parts are visible, as AGLITES require no projecting set screws. The pure white glass shade is attached by means of a concealed metal screw collar which holds the glass firmly in place yet permits its adjustment in the bracket types so that the light may be directed wherever required.

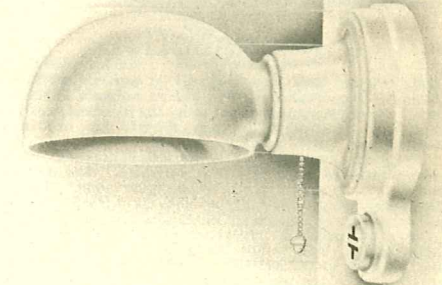

A damp cloth rubbed once over the fixture makes it bright and clean. Installation is made direct to house wires in five minutes with only screw driver and pliers. No canopy insulator is required. No splicing, soldering or taping of wires is necessary.

Standard colors—White, Old Ivory and Gray.
All parts furnished ready for installation.

Method of Installing AGLITE Ceiling and Bracket Types

Bridge (No. 1) is attached to any standard outlet with locknut furnished.

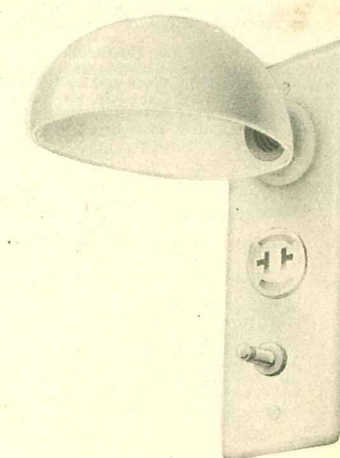

Attach house wires to porcelain socket (No. 3), and clamp it in canopy (No. 5).

Place canopy in position towards ceiling (or wall) with screws (No. 2), projecting through key-hole slots (No. 4).

Turn canopy to right and tighten screws (No. 2) with screw driver.

Glass shade (No. 6) is then placed over Bakelite screw collar of socket and held in position by patented, internal threaded collar (No. 7).

When light is installed no metal parts are visible.

Plug Receptacle Included

Standard tandem two-gang switch box should be provided for mounting this unit. Mounting screws spaced 6 1/2" on centers

The long switch lever may be operated with back of hand or elbow if desired

CLINIC-LITE

This unit has proved most efficient and practical for operating rooms.
Auxiliary lamps on canopy provide general illumination for the room, and center light under reflector provides a large volume of semi-concentrated diffused light on table or chair.

No. R732

Pull Switch for control of two lights, \$2.50.
The additional lights in larger size fixture are for purpose of night or special requirements in addition to regular service light.

NOSHADOLITE

This efficient unit was designed by our engineers in conjunction with several of the best known surgeons in the United States. Its efficiency is attested to by the fact that nearly every hospital of prominence in this country has one or more Noshadolites.

The fixture consists of a ring six feet in diameter on which is firmly fastened eight parabolic reflectors. The unit is suspended from a ceiling plate by a center stem. The ceiling plate, if desired, may be equipped with eight frosted ball lamps for emergencies or for general illumination of the room.

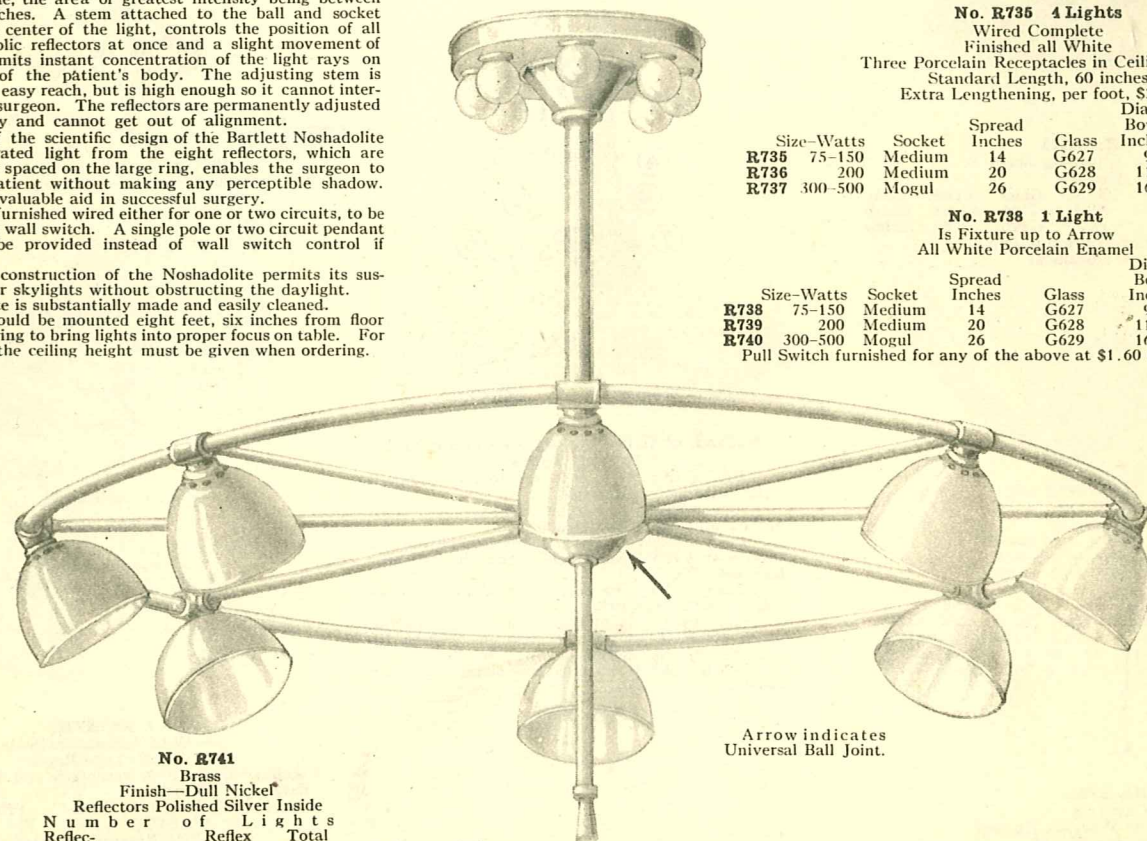

The eight parabolic reflectors are so arranged that the special frosted ball lamps contained in them are concealed from the eyes of the surgeon. Their light is focused on the operating table, the area of greatest intensity being between 18 and 24 inches. A stem attached to the ball and socket mechanism in center of the light, controls the position of all of the parabolic reflectors at once and a slight movement of the stem permits instant concentration of the light rays on any portion of the patient's body. The adjusting stem is placed within easy reach, but is high enough so it cannot interfere with the surgeon. The reflectors are permanently adjusted at our factory and cannot get out of alignment.

Because of the scientific design of the Bartlett Noshadolite the concentrated light from the eight reflectors, which are equidistantly spaced on the large ring, enables the surgeon to bend over patient without making any perceptible shadow. This is an invaluable aid in successful surgery.

Fixture is furnished wired either for one or two circuits, to be controlled by wall switch. A single pole or two circuit pendant switch can be provided instead of wall switch control if preferred.

The open construction of the Noshadolite permits its suspension under skylights without obstructing the daylight.

Noshadolite is substantially made and easily cleaned. Fixture should be mounted eight feet, six inches from floor to center of ring to bring lights into proper focus on table. For this reason, the ceiling height must be given when ordering.

GUTH REFLECTOR FLANGE
Material—The Guth Reflector Flange is unusually strong and substantial, as it is drawn from a single piece of heavy gauge Armco Iron.
Finish—Three coats of permanent porcelain enamel are baked on at high temperature in our Electric Enameling furnaces, producing a surface that is perfectly smooth. This porcelain finish is permanent and cannot check, peel or discolor. Guth Flanges are Time-proof, Weather-proof and Rust-proof.
Mounting—Each Guth Flange is furnished with all necessary parts (including receptacle) ready for installation. The threaded bridge may be attached to fixture stud or screwed to ceiling. Concealed screws in keyhole slots permit quick attachment of flange against the ceiling. Our patented porcelain receptacle is connected direct to house wires without splicing, soldering or taping. No canopy insulator is required. A screw driver and pliers are all the tools needed to install a Guth Flange complete in five minutes time.
Spring Glass Holder—The Guth Flange requires no bothersome set screws to hold glassware. Two extended lips are punched at a 45° angle and glassware of any standard size may be held securely in place by placing the lip

KITCHEN UNIT

Illustrating patented extension bridge for pendant plug-in switch for use with Guth Reflector Flange. This neat, strong porcelain enameled reflector bridge projects 3 1/2" beyond the upper edge of the Flange.

This type of kitchen unit permits the use of various electrical appliances without interfering with the light—simply plugging in makes the connection. The plug also independently controls the light. The extended bridge can be furnished for any size Guth Reflector Flange except K790 (Ball Lamp) and K791 (2 1/4" size).

No. K788

of the globe over horizontal metal tips and releasing the eccentric spring trigger on one side. This grips the glass firmly without the possibility of falling, rattling or breaking.

Cleaning and Re-Lamping—Removal of glassware for cleaning or re-lamping is the work of an instant. Simply releasing the spring trigger enables one to remove the globe without any further effort. This remarkably easy method prevents breakage of glass and a decided saving is effected particularly where a large number of units are installed.

Suggested Applications—Guth Reflector Flanges are especially suited for Offices and Public Buildings, Schools, Semi-Outdoor Pavilions, Stores, Kitchens and Hospitals.

Colors—The standard colors are White, Old Ivory and Gray. Color desired must be specified when ordering.

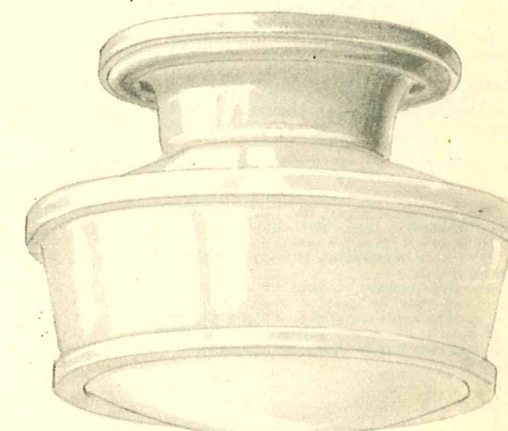

Glassware—Any glass of standard fitter dimensions may be used with the Guth Flange. Several types of glassware are shown below to illustrate the neat appearance and adaptability of the Guth Reflector Flange.

WITH PULL CHAIN SOCKET

Medium Keyless Socket and Joint
Price, \$12.50 Code, Rugro

DAYWAY BOULEVARD LANTERN

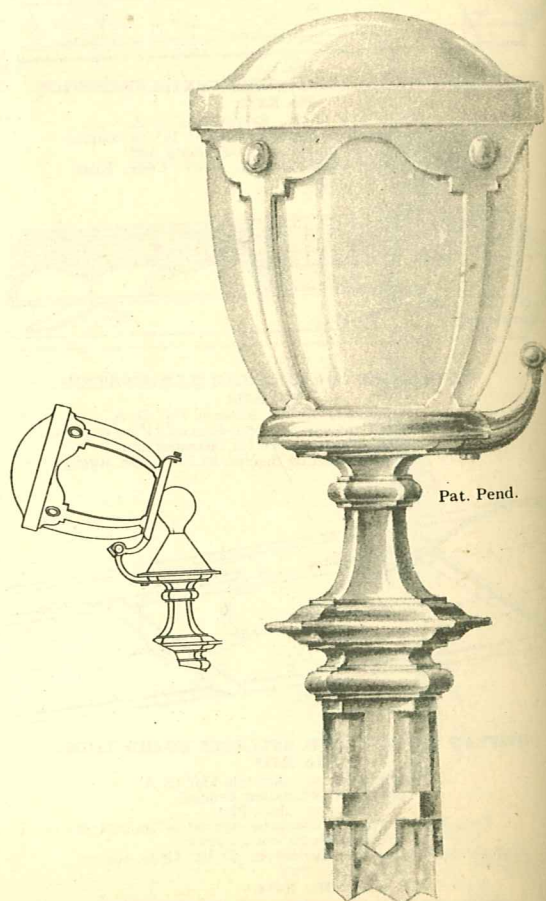

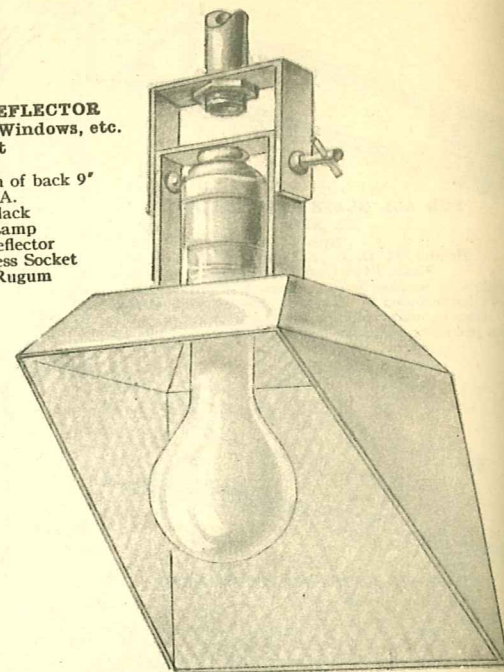

The most efficient and economical Street Lighting Unit.
Combines beauty of design with rugged strength.
High efficiency and low absorption of light.
Wonderful asymmetric diffusion.
Low initial cost with practically little expense for upkeep.
The amazingly short time in which this unit can be cleaned and relamped
effects a decided saving in the cost of maintenance.
DAYWAY BOULEVARD LANTERN consists of a one-piece triple cased
paneled glass that diffuses the maximum amount of light without glare. It is
also furnished with top and one panel (towards building line) coated with
permanent white enamel fired on at high temperature. This aids in getting the
greatest asymmetric diffusion and prevents light shining too brightly on the
houses in front of which the DAYWAY LANTERN is placed.
For street intersections the top can be furnished with green fired on enamel
or with similar top in red to designate location of fire alarm box.
A white glazed porcelain enameled reflector inside the unit refracts rays
downward. The single 500 C. P. bulb fits into a highly polished aluminum
cone which also aids proper diffusion of the light.
Glass Globe is held firmly in place by a patented split ring holder which
prevents rattling or breaking. A single large brass set screw tightens or releases
the globe in a few seconds.
Loosening one large set screw allows entire top of lantern to be swung up-
ward and backward at a 35° angle where it is securely held by the eccentric arm.
Cleaning may be done in a few minutes without removing the lantern
globe or bulb. No tools are required for cleaning or relamping.
Being made of one piece of glass the DAYWAY BOULEVARD LANTERN
has no metal projections to gather dirt and impede cleaning.
DAYWAY is practically dust and bug-proof.
All metal parts (except set screws) are of cast aluminum so there is no
possibility of rusting.

No. R880

CHAIN HANGERS

All standard ceiling type Brascolites may be converted to three-chain suspension types by the addition of standard chain hangers. These hangers are packed in unit cartons, including all necessary parts for installation, and are furnished in plated finish to match the fixtures for which they are intended. The construction is in accordance with underwriters' ruling, and when used with Brascolite fixtures provides a complete approved appliance.

When fixtures using chain hangers are ordered in lengths exceeding 4 feet, the extra lengthening will be made with single chain, as illustrated by sketch above.
